

Break Down

NON-CORROSIVE ACID REPLACEMENT PRODUCT

Break Down is a safe acid replacement product that provides the most technologically advanced low pH product available. It is not only non-irritating to skin, but it is now non-corrosive to metals. The product carries a pH similar to phosphoric acid, yet you can pour it directly on your hands! BREAK DOWN is for weekly detailing of showers to remove excessive hard water deposits that build-up with soap scum.

BREAK DOWN's formula also includes PX37, a polymer that stays behind on tile to produce sheeting of water and soap scum. Therefore, not only will BREAK DOWN clean away unwanted soap scum, but will also prevent its build-up. In between the weekly application of BREAK DOWN, use our multi-purpose product Detail for daily cleaning.

BREAK DOWN uses re-active science; it can be used to unplug urinals that are backed-up due to urine salt deposits as well! Please note that this product is not for everyday use. MSDS available upon request.

Our Bottles

Our custom bottles are designed with the end user in mind! Simply remove the convenient side cap and pour in 1:4 (20% solution to 80% water) of BREAK DOWN and water into side cap. Use our easy measuring guide on the back of the bottle to fill up to 32 ounces of water.

BREAK DOWN Cleans Away Unwanted Soap Scum and Will Also Prevent Its Build-Up.
