

Jaws EF

MICROBIAL CLEANER

Jaws EF has proven to be an effective tool for maintaining the appearance of fuel islands. JAWS EF may also be used on walkways, exterior walls, pavers, concrete and asphalt or any surface unaffected by water.

JAWS EF is a 6 times concentrate strength bio-augmentation product. This means microorganisms are used to extend the cleaning ability of the product beyond that of typical degreasers. The indigenous bacteria will remove organic waste such as petroleum, grease, oil, fat, soap, starch, protein, blood, urine, hair, skin, and associated odors. This product contains unique penetration technology and bio-stimulates. This enables the product to outperform hazardous alkaline cleaners. JAWS EF can be used on any surface unaffected by water (except for food

unaffected by water (except for food contact surfaces and vinyl flooring). JAWS EF adds oxygen to water, therefore it enhances separator and storm water performance! JAWS EF will increase the coefficient of friction simply because the microbes will consume left behind grease and soap film therefore, it reduces your risk to slips and falls!

Instructions:

Spot cleaner:

Fill 3-5 gallon container with water 95%, add entire contents of JAWS EF. Stir. Apply to surface, scrub with wire brush and rinse.

Using hose end sprayer (1/2 gallon) fill with water 90% and add entire contents.

JAWS EF is lighter than water. Stir.

Set mechanical dilution at 1 ounce per gallon. Apply to fuel pads daily and after pressure washing.

SDS available upon request.
